

Joint KEEP / A / B selection

3 exposed replay scenes × 4 ROIs; ROI → scene equal weight; all five conditions retained

A Actual MSE reduction versus KEEP (%) — positive is better

Historical joint A/B	-11.35	-7.12	+10.29	+36.30	+37.53
Previous A + reserved	-4.52	+1.39	+8.55	+46.77	+37.12
Previous B + reserved	-4.15	+1.77	+8.37	+46.45	+36.36
Independent normalized max	-6.06	+0.44	+8.34	+48.92	+38.48
Independent absolute utility	-2.31	+3.99	+7.44	+43.90	+35.04
Shared context	-3.26	+4.08	+7.92	+44.43	+35.97
Shared context + support [primary]	-2.46	+4.35	+7.53	+43.55	+35.15
	Native	-1 mm	+1 mm	-3 mm	+3 mm

B B-only complementary benefit captured (%) — gross, not net gain

Independent absolute utility	0.8	6.8	3.5	16.8	12.3
Shared context	1.8	8.6	4.1	15.0	11.4
Shared context + support [primary]	1.2	6.9	2.7	12.3	9.7
	Native	-1 mm	+1 mm	-3 mm	+3 mm

Panel B uses evaluator-only $\min(\text{KEEP}, A)$ as the reference for B complementarity.
It does not subtract damage from incorrect choices and is not a deployable oracle result.
