Scatter plot showing the percentage of Strict MSE wins versus identity for 100 different models. The x-axis is labeled 'Strict MSE wins versus identity (%)' and ranges from 0 to 100. The y-axis represents different models, grouped into three categories: 'Top 10' (top 10 models), 'Middle 40' (middle 40 models), and 'Bottom 50' (bottom 50 models). Blue circles represent models in the 'Top 10' group, and red squares represent models in the 'Middle 40' and 'Bottom 50' groups. The plot shows that models in the 'Top 10' group generally have a higher percentage of Strict MSE wins versus identity compared to models in the other two groups.
